

WANTED

A renewable energy source

There will be a \$10,000 reward if people like you can...

- Stop using a lot of fossil fuels such as coal, gasoline, and natural gas and instead use wind mills, solar panels, water wheels, and (believe it or not) cow and horse manure
- Fossil fuels should be reduced because supplies will run out, the environment will be endangered and ruined, and prices of different types of fossil fuels will rise. The chance of Global Warming will rise.

- People at home can help by buying more efficient cars, solar panels, and other energy-efficient entities
- Thanks to scientists' recent discoveries from around the world, we can now start trying to make a prototype of cars running on hydrogen!!

(Did you know that the average wind speed on earth is about 9 MPH, and if a windmill is facing the wind, it can produce 50 watts?)

If done please contact Gabby and Sunil.
